

ORISABIYI DAVID

Software Engineer

+234 916 633 1550 | orisabiyidavid@gmail.com | github.com/orisabiyi | <https://medium.com/@orisabiyidavid>

Software engineer with 4+ years shipping production software across the full stack, from database design and APIs to the interfaces people actually use. I do my best work when the off-the-shelf answer doesn't fit. I built a routing engine on a self-hosted OSRM because standard map data didn't reflect how Lagos traffic actually moves, redesigned an address flow that cut order abandonment by 30%, and brought API responses down from 10s to under 1s. I've shipped platforms serving 2M+ users. I write about production engineering on Medium.

PROFESSIONAL EXPERIENCE

Senior Software Engineer, Fez Delivery · Full-time

- Engineered a **route optimization microservice** using self-hosted OSRM and Lagos-specific traffic multipliers (1.8–3.0x), stress-tested at 50 concurrent requests.
- Developed and scaled the **B2B dashboard** for business customers, optimizing address suggestions to reduce Google API costs.
- Integrated **various payment gateways** (OPay, Paystack, Nomba, Stripe) across consumer and B2B platforms, doubling monthly order volume.
- Designed a **multi-layer address system** (Google Places, Mapbox autocomplete, map selection, manual entry) that reduced order abandonment by 30%.
- Improved team delivery velocity by **20–25%** through process and tooling enhancements.

Fullstack Engineer, eCorpIT · Full-time

- Shipped multiple products across **finance, healthcare, and payments** as part of a lean team working across frontend, backend services, and deployment.
- Reduced development costs by **~50%** by identifying and implementing free, production-grade alternatives to paid tools and services previously licensed.
- Cut **page load times by 80%** and reduced API response times from **10s to under 1s** through frontend performance optimization and backend query restructuring.
- Delivered platforms serving **2M+ users** with **99% Lighthouse scores** across performance, accessibility, and best practices.
- Contributed to and led architectural decisions on **database design** (MongoDB, Prisma/PostgreSQL), **AI integration** (LangChain, LlamaIndex), and **frontend infrastructure**.

Software Engineer/Consultant, Pitch Insight Consulting (client: Black Founder Network)

- Delivered a **ground-up redevelopment** of the BFN platform from new Figma designs, rebuilding every page, component, and interaction using **InertiaJS** and **Laravel**.
- Implemented **WCAG accessibility compliance**, ensuring usability for individuals with disabilities, including screen reader support and keyboard navigation.
- Integrated **multi-language switching** across the platform, expanding reach to non-English-speaking communities.
- Contributed to **architectural decisions** shaping both **frontend and backend** structure, routing, database design, and state management patterns.

Fullstack Engineer, Global Banking and Finance

- Executed a **100% platform overhaul**, redesigning, rebuilding, and migrating a high-traffic financial news platform from **WordPress** to a modern stack (**Next.js, Node.js, Sanity CMS, MongoDB**).
- Migrated all existing content — news articles, posts, and magazines — from WordPress to Sanity CMS and MongoDB with **zero content loss**, preserving **SEO rankings** throughout the transition.
- Architected a **micro-frontend strategy** and **SEO overhaul** that drove a **25% increase in user engagement** and **15% reduction in bounce rate** post-launch.
- Delivered **99% Lighthouse scores** across performance, accessibility, and best practices on the rebuilt platform.

LEADERSHIP & WRITING

- Founded Common Chronicles, a community for builders, creatives, and storytellers in tech; Discord, a custom website, and a Node.js content automation bot.
- “The OTP That Arrived Four Minutes Late” — Medium, Aug 2026, on SMS gateway queuing, TTL windows, and a security default nobody revisited. More at medium.com/@orisabiyidavid.
